

ALICE

Your
very own
Digital AI
Voice Assistant
with ChatGPT
capability

How did this idea come to life?

The concept of digital AI voice assistants originated from the intersection of advancements in natural language processing and the growing demand for hands-free interaction with technology.

Based on this concept, we have decided to create a more informal, easier to approach, and much more accessible version, which will assist users with their everyday life as well as always be ready to answer every question they may have. Our assistant caters towards casual users but will be able to provide answers to more specific questions.

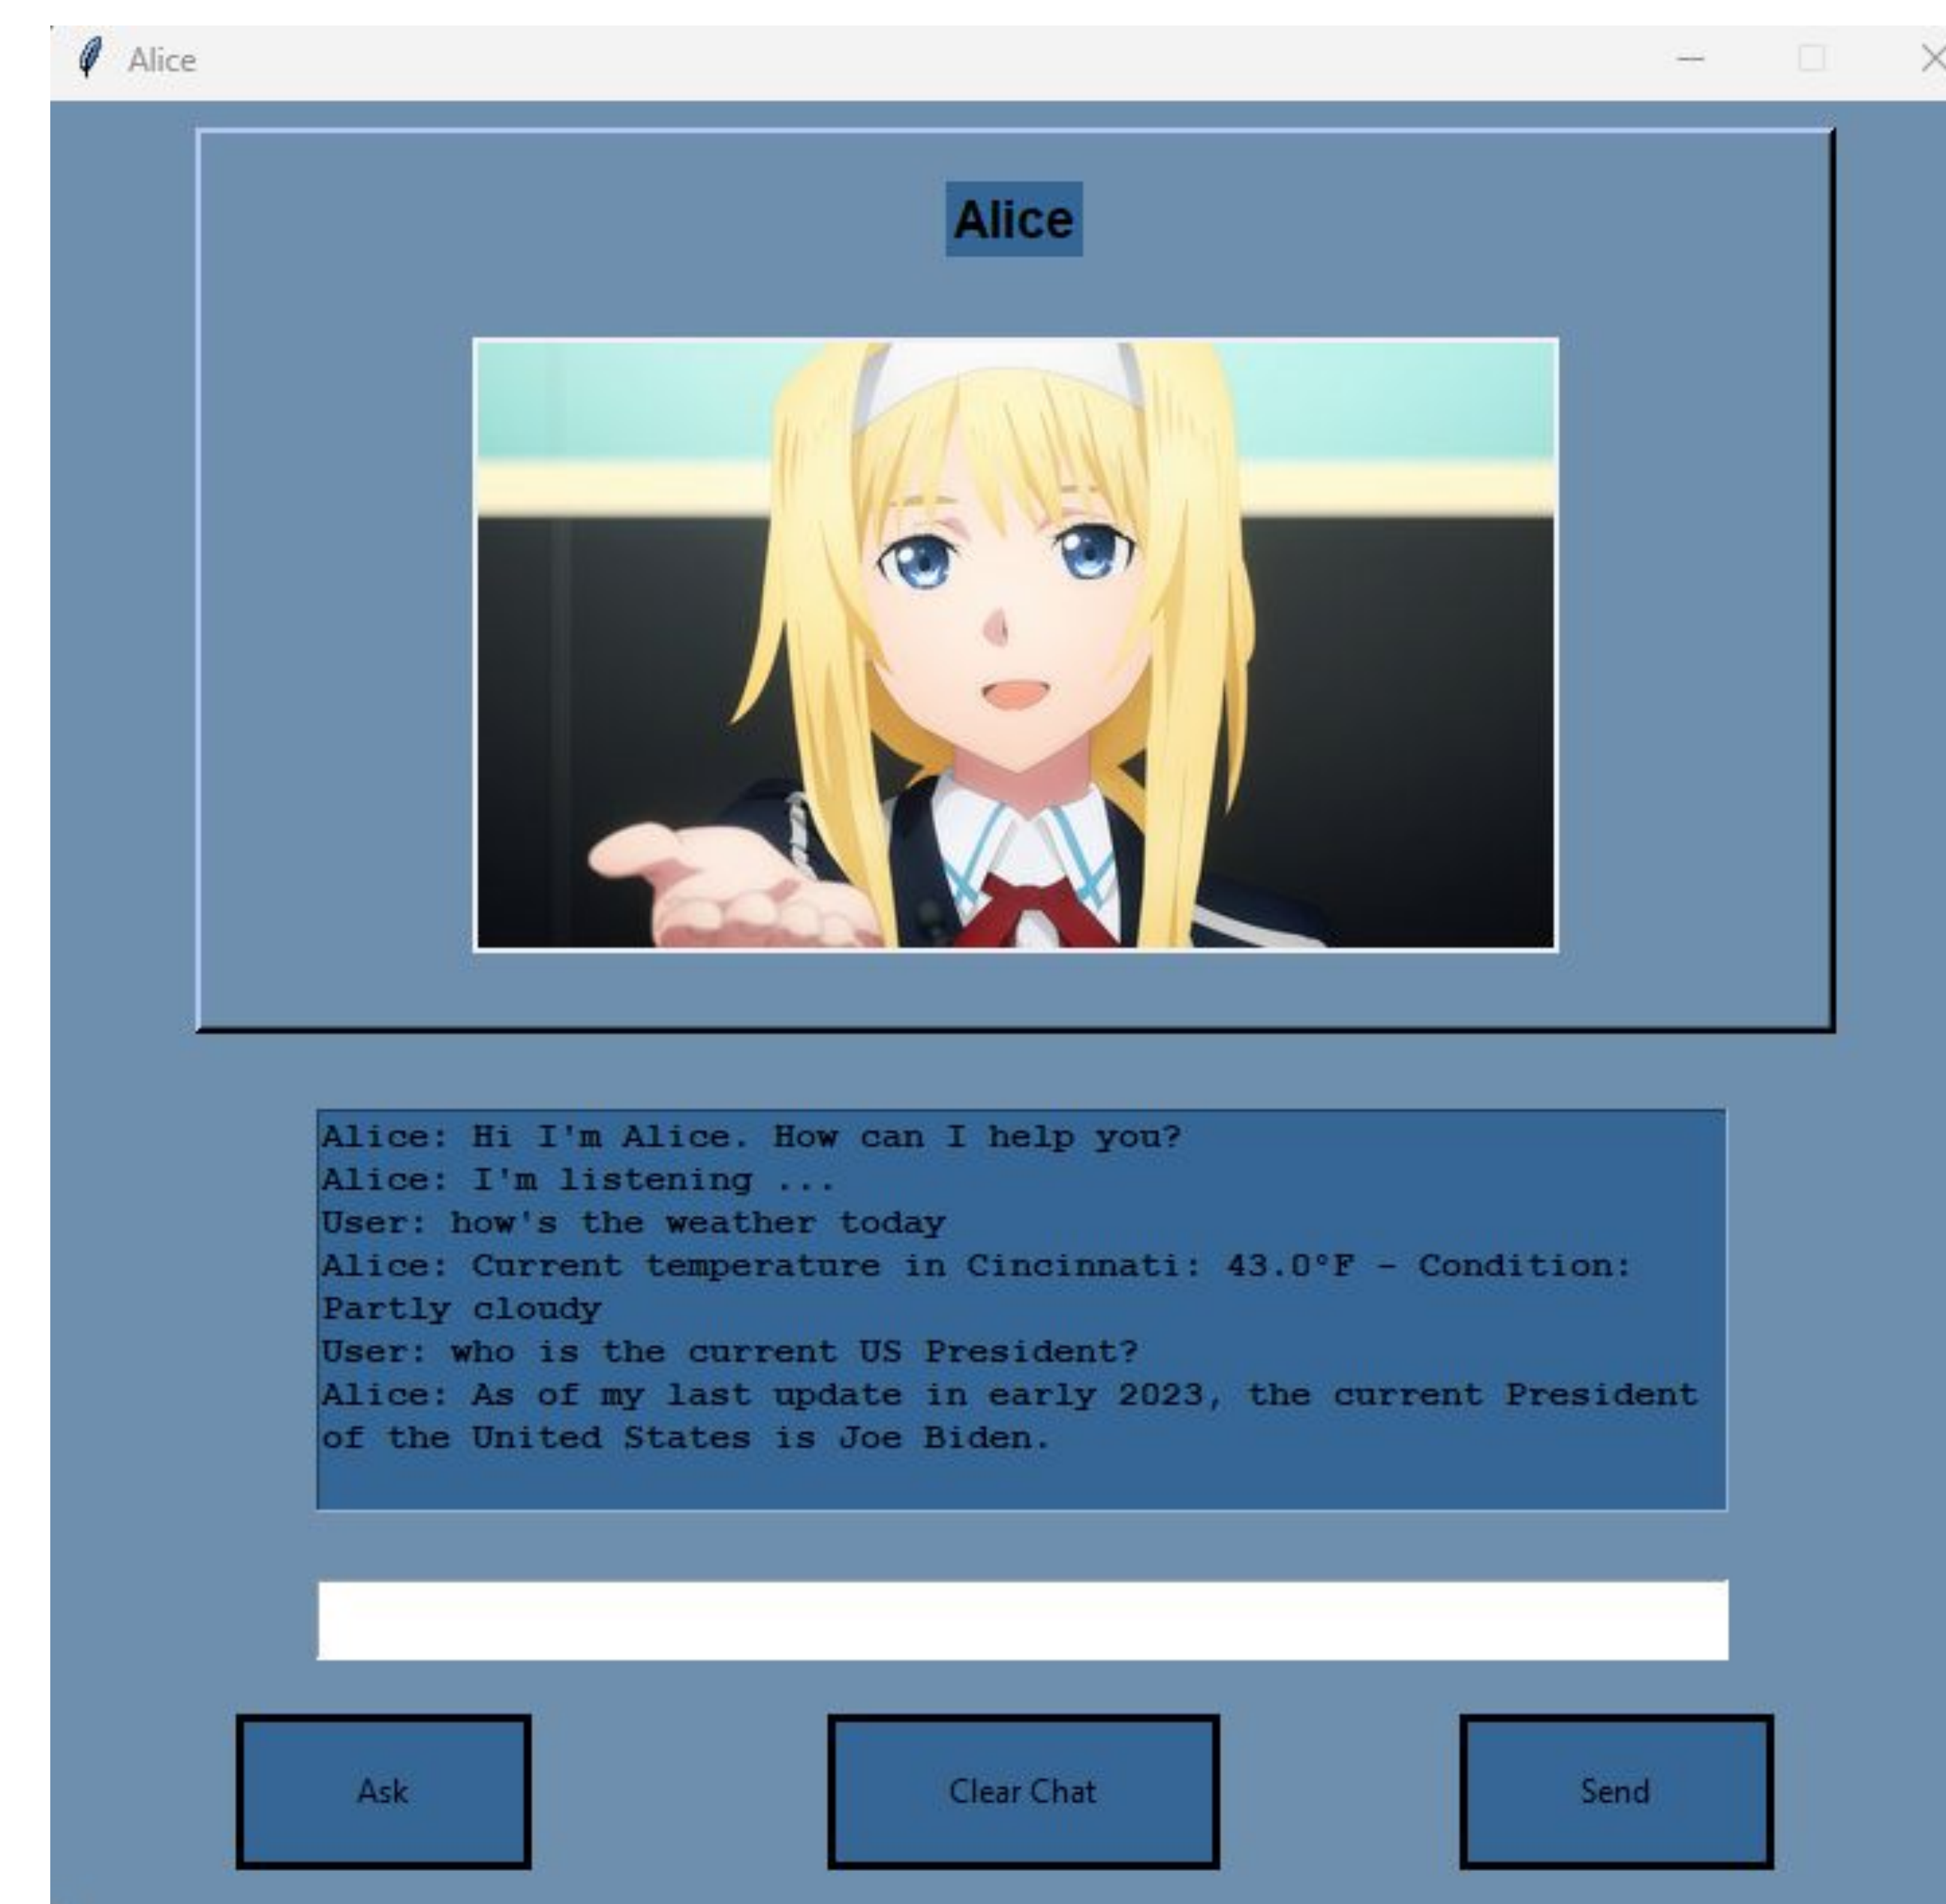

Challenges

- Working with Chat GPT API
- Develop extra functionalities
- UI/UX Design
